PROJECT COMPLETION REPORT

TruLearnix

Full-Stack EdTech & Partner Earnings Platform

April 2026
COMPLETION DATE

v1.0
VERSION

Production
STATUS

1 Project Overview

TruLearnix is a full-stack EdTech and partner earnings platform built from the ground up. The platform enables learners to enroll in courses and packages, while simultaneously running a multi-level partner program where members earn commissions by referring others. The system includes dedicated panels for Students, Partners, Sales Team, Mentors, Managers, and a Super Admin — all under a single unified backend.

Platform URLs

Application	URL	Audience
Main Website (Web)	https://trulearnix.com	Students, Partners, Public
Admin Panel	https://admin.trulearnix.com	Super Admin, Admin
TruLancer	https://trulancer.trulearnix.com	Freelancers
QA / Testing	https://qa.trulearnix.com	Internal QA
API	https://trulearnix.com/api	All apps

2 Platform Modules

Student Panel

- ✓ Dashboard with progress overview
- ✓ Course enrollment & video learning
- ✓ Live classes with recording access
- ✓ Assignments & quizzes
- ✓ AI Coach (NOVA) integration
- ✓ Certificates generation
- ✓ EMI installment management
- ✓ Wallet & rewards
- ✓ Community forum
- ✓ Report cards & performance
- ✓ Support tickets
- ✓ Brand & freelance section
- ✓ Job board access
- ✓ Upgrade / package selection

Partner Panel

- ✓ Partner dashboard & earnings overview
- ✓ Referral link generator
- ✓ Team / downline tracking
- ✓ Commission & MLM earnings
- ✓ Leaderboard & rank
- ✓ Partner training modules
- ✓ KYC document upload
- ✓ EMI commission tracking
- ✓ Withdrawal requests
- ✓ M-Type qualification system
- ✓ CRM for leads
- ✓ Achievements & milestones
- ✓ Paywall — locked until purchase

Sales Panel

- ✓ Sales dashboard & KPIs
- ✓ Lead management (Kanban)
- ✓ Order creation (Full / Token)
- ✓ EMI order management
- ✓ Meeting room scheduler
- ✓ Commission & earnings
- ✓ KYC submission
- ✓ Link generator
- ✓ Withdrawal requests
- ✓ Calendar & reminders

Mentor Panel

- ✓ Course creation & management
- ✓ Live class scheduling
- ✓ Student performance tracking

- ✓ Quiz & assignment creation
- ✓ Attendance management
- ✓ Salary slip view
- ✓ Report cards submission
- ✓ KYC submission
- ✓ Study material upload
- ✓ Support tickets

Manager Panel

- ✓ Team performance dashboard
- ✓ Partner management
- ✓ EMI commission tracking
- ✓ Leaderboard monitoring
- ✓ Withdrawal approvals
- ✓ Team analytics

⚙Super Admin Panel

- ✓ Full user management
- ✓ Package & course management
- ✓ Financial dashboard & reports
- ✓ EMI & payment oversight
- ✓ Mentor & employee salary
- ✓ Attendance & HR management
- ✓ Content CMS (About, Legal etc.)
- ✓ Marketing & campaign tools
- ✓ Security logs & monitoring
- ✓ Platform settings & toggles
- ✓ Webinar management
- ✓ NOVA AI config
- ✓ Notification center
- ✓ Withdrawal management
- ✓ Commission approvals

3 Technology Stack

FRONTEND — WEB

Next.js 14 (App Router)
TypeScript
Tailwind CSS
Zustand (State)
React Query
Framer Motion
React Hook Form + Zod

FRONTEND — ADMIN

Next.js 14
TypeScript
Tailwind CSS
Recharts (Analytics)
React Query

BACKEND — API

Node.js + Express
TypeScript
MongoDB + Mongoose
Redis (OTP / Cache)
JWT Authentication
Socket.io (Real-time)

PAYMENT

PhonePe Payment Gateway
Full / EMI / Token flows
Webhook verification
Invoice email on payment
Razorpay (pending client setup)

STORAGE & CDN

Cloudflare R2 (recordings)
AWS S3 (media uploads)
Sharp (image processing)
FFmpeg (video)
Local uploads fallback

COMMUNICATION

WhatsApp Business API (Meta)
Nodemailer SMTP
OTP via WhatsApp + Email
Push Notifications (web)
Razorpay X (pending)

INFRASTRUCTURE

Ubuntu Linux (VPS)
Nginx reverse proxy
PM2 process manager
Let's Encrypt SSL
GitHub CI/CD ready

SECURITY

Rate limiting (express-rate-limit)
Mongo-sanitize (NoSQL injection)
HPP (param pollution)
Helmet (HTTP headers)
IP blocking system
Security audit logging

AI INTEGRATION

NOVA AI Coach
OpenAI / configurable
Chatbot flow builder
Admin-configurable prompts

4 Key Features Delivered

Authentication & Security

Feature	Status
OTP Registration via WhatsApp + Email	Done
JWT Access + Refresh Token system	Done
Role-based access control (6 roles)	Done
Forgot password via WhatsApp + Email OTP	Done
Rate limiting & IP blocking	Done
Security audit log	Done

Payment & Finance

Feature	Status
PhonePe integration — Full payment	Done
EMI / Installment payment (admin toggle)	Done
Token / Advance payment flow	Done
GST calculation & invoice emails	Done
Individual course purchase (PhonePe)	Done
Guest checkout (no login required)	Done
Wallet system for students	Done
Withdrawal + TDS + gateway fee	Done
Razorpay X (payouts)	Client Pending

Partner / MLM System

Feature	Status
Multi-level commission engine	Done
Partner earning matrix per tier	Done
Referral link + promo code	Done
Partner panel paywall (purchase required)	Done
M-Type qualification system	Done
Leaderboard & achievement posters	Done
EMI commission tracking	Done

4 Key Features Delivered (Continued)

Learning Management

Feature	Status
Course creation with lessons & materials	Done
Live classes with Cloudflare R2 recording	Done
Batch management system	Done
Quizzes & assignments	Done
Auto-certificate generation	Done
AI Coach (NOVA) per student	Done
Progress tracking & report cards	Done
Study materials management	Done

Admin & Operations

Feature	Status
Full analytics dashboard	Done
Mentor & employee salary management	Done
HR — attendance, holidays, leave	Done
CRM for leads & follow-ups	Done
Platform settings (maintenance, EMI toggle)	Done
About & Legal pages CMS	Done
Webinar management	Done
Popup & marketing campaign manager	Done
Notification center (web push)	Done

Communications

Feature	Status
WhatsApp Meta API — OTP, welcome, alerts	Done
Transactional emails (SMTP)	Done
Invoice emails on every payment	Done
Salary slip emails	Done
Withdrawal confirmation emails	Done
WhatsApp Business API (official, Meta)	Client Pending

5 Pending — Client Side

The development is 100% complete from the engineering side. The following 2 items are pending on the **client's side** for final production readiness. Both are third-party account setups that only the client can complete.

Pending Items (Client Action Required)

1. WhatsApp Business API — Official Account (Meta)

The platform currently uses WhatsApp messaging via a configured API key. For full production use, the client needs to complete Meta's WhatsApp Business Account (WABA) official approval process.

Action: Register at business.facebook.com → Create WhatsApp Business Account → Get official API credentials → Share with developer to update .env
Impact: Until done, WhatsApp messages may have sending limits. Core platform functionality is unaffected.

2. Razorpay X Account — Automated Payouts

Razorpay X is used for automated partner withdrawal payouts directly to bank accounts. The code is fully written and integrated. The client needs to create a Razorpay X account and provide credentials.

Action: Register at razorpay.com/x → Complete KYC → Create API keys → Share RAZORPAY_KEY_ID, RAZORPAY_KEY_SECRET, RAZORPAY_ACCOUNT_NUMBER with developer
Impact: Manual withdrawal processing until activated. All other payment features (PhonePe inflow) work fine.

6 Infrastructure & Deployment

SERVER
Hostinger VPS
Ubuntu Linux 22.04 LTS

PROCESS MANAGER
PM2 (Cluster Mode)
4 instances for prod-api, auto-restart

WEB SERVER
Nginx
Reverse proxy, SSL termination, gzip

SSL
Let's Encrypt
Auto-renewing, all subdomains covered

DATABASE
MongoDB Atlas
Cloud-managed, replicated

CACHE / OTP
Redis
OTP storage, session caching

FILE STORAGE
Cloudflare R2 + AWS S3
Recordings on R2, media on S3

SOURCE CONTROL
GitHub
Repo: MohdRizwan0786/Trulearnix-

ENVIRONMENTS
QA + Production
qa branch → qa.trulearnix.com
production branch → trulearnix.com

DOMAIN / DNS
Cloudflare DNS
trulearnix.com + all subdomains

Security Measures Implemented

- Rate limiting on all API endpoints (100 req/15min per IP)
- MongoDB injection sanitization (mongo-sanitize)
- HTTP Parameter Pollution protection (HPP)
- Secure HTTP headers (Helmet.js)
- Automatic IP blocking after repeated failed auth attempts
- OTP expiry (10 min) — no OTP leak in production responses
- JWT refresh token rotation with secure storage
- All file uploads validated for type and size

All file uploads validated for type and size

Security audit log stored in database for admin review

7 Project Sign-Off

This document certifies that the **TruLearnix Platform v1.0** has been fully developed, tested, and deployed to production as of **April 21, 2026**. All agreed features have been implemented and are live at **https://trulearnix.com**. Two items remain pending on the client side (WhatsApp Official API & Razorpay X), which do not affect core platform functionality.

Deliverables Summary

Deliverable	Status
Web Application (trulearnix.com)	Live
Admin Panel (admin.trulearnix.com)	Live
REST API (trulearnix.com/api)	Live
TruLancer (trulancer.trulearnix.com)	Live
QA Environment (qa.trulearnix.com)	Live
Source Code (GitHub)	Delivered
WhatsApp Official API	Client Pending
Razorpay X Payouts	Client Pending

Acknowledgement & Sign-Off

Both parties confirm that the project scope has been fulfilled as described in this report.
